

User Guide

Practical quick-start guide for daily procurement, warehouse, inventory, and reporting work.

ProcuraFlow Professional Edition

Issued 11 August 2026

Getting Started

1. Open <http://localhost:5173> and sign in with your individual employee account.
2. Change a temporary password when prompted; never share credentials.
3. Review Dashboard KPIs and My Task List at the start of each workday.
4. Double-click a task to open its source document.
5. Use only the functions, reports, warehouses, and approval limits assigned to you.

Procurement Quick Start

1. Create and submit a Purchase Requisition with required date, justification, and item lines.
2. Create an RFQ, invite suppliers, enter quotations, and compare landed cost and non-price factors.
3. Create a PO from one or more approved PRs; verify supplier, quantity, price, tax, terms, currency, and committed delivery date.
4. Submit for approval. For over-limit orders, generate and attach signed external management evidence.
5. After receipt, register the supplier invoice and review PO/GRN/invoice differences before Finance submission.

Warehouse Quick Start

1. Open Goods Receipt and select an approved or printed PO.
2. Confirm assigned warehouse and exact destination Bin.
3. Enter received, accepted, and rejected quantities; record rejection reason, batch, and expiry where required.
4. Post the GRN. Only accepted quantity updates stock and partial deliveries keep the PO open.
5. Use controlled Material Issue, Return, Transfer, Bin Transfer, and Adjustment workflows; never edit a posted movement.

Inventory Control

- ? Use Real-Time Stock and FIFO Valuation to review quantity and value by physical location.
- ? Monitor expiry, batches, low stock, ABC classification, and dead stock.
- ? Perform cycle counts, submit variances, and route approval to someone other than the counter.
- ? Trace unexpected balances through Stock Ledger source references.

Reports and Documents

- ? Select only authorized reports and apply appropriate dates, warehouse, department, and supplier filters.

- ? Confirm currency, totals, Generated By, and generation time before distribution.
- ? Export Excel for analysis and PDF/Print for controlled evidence.
- ? Use professional PR, PO, GRN, management approval, and Finance verification documents as the official record.

Daily Safety Rules

- ? Confirm document status before action: Draft, Submitted, Pending Approval, Approved, Printed, Posted, Rejected, or Closed.
- ? Do not approve your own work unless the configured Supply Chain Manager exception explicitly applies.
- ? Do not bypass warehouse scope, quantity validation, approval limits, or supporting evidence.
- ? Report access problems, incorrect balances, and suspected duplicate records before continuing.
